STRIPE OLT

BACK UP & DISASTER RECOVERY

Backing up your data ensures that it is protected, should you be faced with deletion, corruption, or natural disasters.

Whilst restoring and protecting data is undoubtedly crucial to any business, disaster recovery takes data restoration one step further.

Not only are there now ever-present cyber-threats growing in complexity each day, it is also important to recognise that data loss can additionally be caused by human error, hardware failure or natural disasters. Subsequently, business continuity plans now have the potential to become highly complicated affairs.

Stripe OLT combat this complexity by leveraging a comprehensive perception of your business's digital infrastructure, enabling our team of industry-leading experts to build and implement a robust and highly operational back up and disaster recovery plan, equipped to restore and protect your vital assets.

WHO IS IT FOR?

Our dynamic continuity services are for any organisation looking for a highly effective, enterprise level disaster recovery solution. Utilising industry-leading technology we will prepare you to face possible adversity, with minimal disruption.

KEY BENEFITS

A comprehensive documented process

Backup and disaster recovery solutions need to be devised, installed and tested long before they are needed in order to maintain the health of your business and the productivity of your employees. As such we'll plan, test and document before we enable any new systems, to ensure you have a complete, comprehensive solution.

Expert cloud consultancy

Through employing our extensive knowledge of innovative cloud-technology, our advanced backup and disaster recovery solutions can support both a public-cloud or a hybrid-cloud approach, depending on which would provide your business with the maximum benefit.

Cyber security specialists

In addition to our cloud expertise, we're highly certified cyber security specialists. This means we are able to predict likely threats and therefore provide a highly effective and actionable recovery plan, to protect against physical disasters as well as cyber-crime.
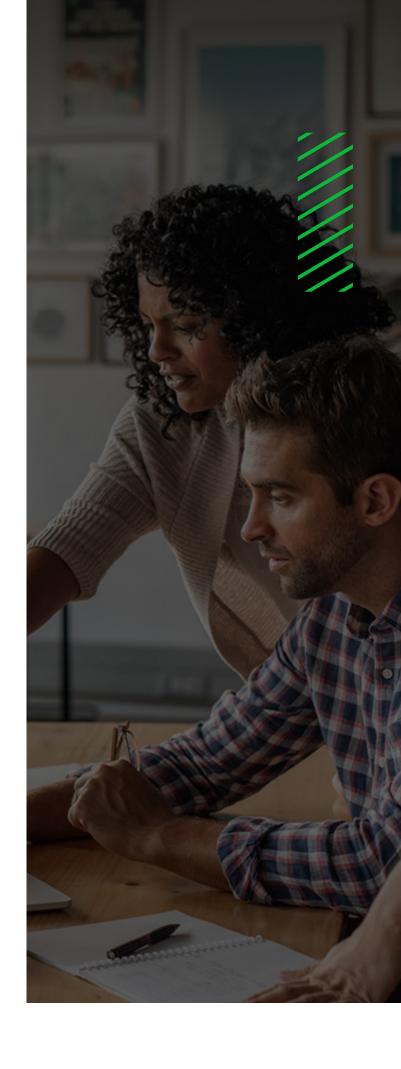

Expert support

We only employ 2nd and 3rd line engineers which means we have a team of highly experienced specialists at your disposal, providing you expert advice and actionable guidance.

Cutting edge technology

As a Microsoft Gold Partner, with expertise in remote working technologies, we will ensure that your team leverage cutting-edge cloud solutions and adopt a truly robust continuity plan.

HOW MUCH DOES IT COST?

We understand that there is no 'one-size-fits-all' data recovery solution, which is why our back up and disaster recovery plans are dependent and costed on organisation requirement.

WHY STRIPE OLT?

With over 15 years experience, across a vast range of sectors, our experts have cultivated a deep knowledge of business technology. Our dedicated professionals are trusted to pro-actively manage, secure and protect critical, national infrastructures including NHS trusts, airports, and FTSE 100 financial leaders.

We combine a vast knowledge of IT and security technology, to provide our clients with complete, business technology solutions.

OUR BUSINESS TECHNOLOGY CLIENTS

HOW DOES IT WORK?

- First, we carry out discovery session with your team; here our specialists will gain a holistic understanding of your business, it's practises and procedures. Once this has been carried out, we will begin a series of technical concentrated assessments and audits.

- Next, we carry out a risk assessment - In doing this we can identify the most likely threats to your business, along with their severity. Following this, we are then able to suggest ways in which to combat these risks through network or infrastructure improvements.

- Through our bespoke and tailored solutions, you are able to choose whether to work alongside our team of experts, and integrate your key systems into our trusted and reliable managed service support, or alternatively, we can help you plan and document your own disaster recovery solution.

- In order to ensure that your disaster recovery solutions remain highly effective, Stripe OLT also offer the option to review, monitor and adapt these plans, to flux with the ever-evolving threat landscape. This ensures your strategy is ready to go whenever it is required.

ADDITONAL SUPPORT SERVICES

Managed IT Support

Disaster Recovery's bigger, more strategic brother, Business Continuity requires an in-depth understanding of your business Whether you're looking to upgrade from an outdated IT support model or require a highly functioning, multi-channel service desk, our industry-leading Managed IT Support services will confidently surpass your requirements.

IT Relocation

Our office IT relocation and installation services are for any organisation that requires a premise move. With a focus on end-user enablement, we deliver a strategic plan to allow a seamless and efficient transition without penalties such as downtime and disruption.

Device as a Service

If you need new hardware to support your tech-first workforce, you can eliminate high upfront costs by breaking down your device purchasing into smaller, regular monthly payments with our DaaS solution.
