

MANAGED SIEM

Gain complete protection and visibility over your security with our managed Microsoft SIEM solution.

Stripe OLT's dedicated SecOps team leverage cutting-edge Microsoft detection technology and artificial cyber intelligence, to offer an unparalleled SIEM solution. Utilising Azure Sentinel, we provide a bird's-eye view across your entire enterprise...

We can help you make your threat detection and response smarter and faster with artificial intelligence (AI). We'll eliminate security infrastructure setup and maintenance, with the power to elastically scale to meet your security needs – all while reducing costs.

All toolsets and configurations we use to securely monitor your environment, whether established within Sentinel or Microsoft's EMS suite, are stored within your organisation's Microsoft 365 tenancy. This mean you have complete access and full visibility over the service you receive, in addition to the toolsets we are using.

WHO IS IT FOR?

Our managed Azure SIEM solution is there for organisation that share large quantities of sensitive data both internally and externally, has multiple office locations or remote users, and for those that require total visibility and security throughout their estate.

Stripe OLT are equipped to remove the need for heavy internal resourcing, whilst providing a single point of ownership and

HOW DOES IT WORK?

Detect and Prevent

By utilising a combination of key Microsoft security technologies, Stripe OLT's SecOps team are able to proactively monitor and protect your users and systems, in real time 24/7.

From endpoint detection and response, such as patch management and network protection, to enforced ransomware mitigation, like firewall alerts and leaked credential monitoring, Stripe OLT are equipped to provide a fully managed security solution that will defend and protect your business and proactively prevent potential threats.

Respond and Investigate

Our team of Microsoft, CREST, SANS and GCHQ certified engineers, live in the Microsoft ecosystem. Combining both a deep technical knowledge and wide-ranging military skill set, our SecOps team have the expertise required to respond, contain and investigate upon detection of a threat or a potential breach.

Containment and restoration are critical when limiting damage to business operations, however at Stripe OLT, we know that forensic investigation is also crucial if you want to understand how and where your business is still potentially vulnerable. Threats are constantly evolving, and as such our SecOps team utilise cutting edge, Sentinel AI to aid forensic investigation, ultimately helping our clients stay one step ahead.

Reporting & Compliance

We know security goes beyond detection and prevention, so we believe in investigation and user-education as a means of prevention; users need to know how and why an incident has occurred in order to stop future attacks.

As such we provide a range of services to facilitate your workforce and promote companywide awareness; through e-mail phishing campaigns and monthly vulnerability assessments & reporting, we provide both users and decision makers with the knowledge they need to make informed security decisions.

Crucially, we take a two-fold approach, additionally assessing your business systems, network and processes, to ensure we provide a managed and informed response if your systems come under attack. In doing this we can limit damage and endeavour to prevent the exposure of your valuable data.

KEY MICROSOFT SECURITY TECHNOLOGIES

AZURE ACTIVE DIRECTORY

We utilise the most trusted identity and access management solution in the market, to help our clients safeguard user credentials and connect people securely to the apps they need.

MICROSOFT INTUNE

This security solution is cloud-based, which mean we can provide unified endpoint management, access management, and data protection across complete client systems and networks.

MICROSOFT SECURE SCORE

An application we love at Stripe OLT – this software provides intelligent insights and guidance that helps us maximise your security posture, with Microsoft 365 and Azure.

MICROSOFT DEFENDER FOR IDENTITY

Another cloud-based solution that helps protect client identities from multiple types of targeted cyberattack.

AZURE INFORMATION PROTECTION

This solution is a key part of the Microsoft security stack, providing cloud-based data classification, tracking, protection,

MICROSOFT CLOUD APP SECURITY

We used this cloud access security broker for discovery insights, behavioural analytics, risk assessments, data protection management, and threat protection.

ACCREDITED SECURITY PARTNER

Microsoft - Gold Certified Partner

Our Microsoft Gold-Certified cloud consultants have direct access to the latest Microsoft training, qualifications and tools; which means our workforce are not only experts in their field, but are equipped to deliver and implement industry leading secure, cloud technologies.

CREST - Penetration Testing Certified

In achieving this globally recognised accreditation, we've positioned ourselves as a leading provider of penetration testing services. In undertaking these stringent assessments we have demonstrated that our business processes, data security and testing methodologies meet the highest standards.

Cyber Essentials PLUS - NCSC Certified

In gaining this practitioner status, our team of experts are ideally placed to support clients with their own accreditation journey, whilst additionally giving our partners the confidence in knowing that we are fully equipped to provide holistic protection across their systems.

GCHQ - Cyber Security Training Certified

At Stripe OLT, the APGM Accredited Trainer status has been achieved for both offensive and defensive cyber security, which means we can deliver robust training courses, focussing on Incident Response, Digital Forensics, Managed Alerting and Penetration Testing.
